*The V-6 engine was developed and is manufactured by Société Franco-Suédois de Moteurs-Prv, a company owned by Volvo jointly with Peugeot and Renault. The six-cylinder Diesel used by Volvo was fabricated for Volvo by Volkswagenwerk AG. The turbocharger was developed and adapted for the Diesel by Volvo.

What Kind of Person Drives A Volvo?

There is a certain sort of car owner. Thoughtful. Secure. Self-reliant. The sort whose decisions aren't based on the opinions or values of others.

The kind of person who drives a Volvo.

There's nothing flashy about a Volvo, unless it's superb design and excellent engineering. Volvos don't impart status—except the status of driving what most experts agree is one of the world's best-made cars. "The Volvo look," whether expressed by our 240 series or our newer 700 series, evinces solidity and sophistication: qualities evocative of our tradition of soberly, surely seeking the best. For beneath the skin of a Volvo, you'll find automotive excellence—in safety, comfort, performance and value.

Who drives a Volvo? Those who accept the challenge of understated greatness. They won't say much about it—that's not their style. But you can tell them by the car they drive.

In keeping with Volvo's traditional concern for safety, we ask that you and all your passengers use seat belts—every time you drive. Seat belts and proper child restraints can help save lives—if they're used. Please remember that most states now have mandatory child restraint laws which hold the driver responsible for compliance.
